WG INTETECH

A Wood Group business

Engineering Design & Build Support

Wood Group Intetech

Wood Group Intetech (WG Intetech) has been active within the oil and gas industry for more than 20 years. Our services help to enhance the life of oil and gas production facilities, flowlines and pipelines, process systems, utilities and support facilities globally. Our specialist engineers and consultants deliver effective and reliable materials engineering, corrosion and integrity management throughout the asset lifecycle, from design, construction and commissioning, to operation, change of use and decommissioning.

Engineering Design & Build Support

Understanding material integrity is a key factor in optimising engineering design and the long-term effective performance of equipment and facilities. WG Intetech's experienced engineers support clients globally by evaluating corrosion and material degradation threats. We make cost-effective and reliable materials selections and plan corrosion mitigation and management strategies to improve safety, reduce capital and operating costs, and minimise the environmental impact of operations.

Ask Wood Group Intetech

Operators and contractors come to WG Intetech for our expertise and because of our reputation. We are a trusted partner to some of the industry's largest oil and gas companies, and provide a reliable and responsive service that delivers on scope, on time and within budget.

Our clients value our commitment, industry knowledge and track record to get to the heart of their issues. WG Intetech offers:

- Unrivalled domain expertise
- Access to market-leading technology
- A proven track record of delivery
- A collaborative approach
- Global presence, local capability

WG Intetech's core expertise lie in materials and corrosion engineering, including corrosion risk evaluation in oil and gas production. However, our skilled engineers have extensive experience in corrosion assessment in a wide range of areas including: selections of metals and non-metallic materials; corrosion mitigation and management of corrosion risks; metallurgy and welding engineering.

Engineering Services and Solutions

WG Intetech plays a vital role in supporting major international EPCs in conceptual design, front end engineering design (FEED) and detailed design and build projects. We support operators and end-users through the independent review of design documents and specifications, and technical audit activities.

Our Engineering Services Include:

- Materials and corrosion studies
- Corrosion risk assessments
- Review of designs and materials specifications
- Corrosion management plans
- Equipment specifications
- Bid evaluations
- Supplier audit and inspection
- Resolution of NCRs during construction
- Welding and NDT procedure qualification
- Plan and equipment inspection
- Advice on commissioning, start-up and operation
- Material qualification programmes
- Process modifications and change of use

**We provide the answers you need to identify cost savings and anticipate problems before they occur.
